1) PROJECT INFORMATION

Field of expertise related to the topic: EFN as end-user partner offers a wide expertise in:

- Recruit Country Experts coordinating specific actions;
- Collecting frontline and gender sensitive data for research;
- Identifying, assessing, and making visible good clinical practices in health services;

- Integrate experiences from a women-led profession;
- Dissemination and exploitation of results;
- Organise policy and political discussion in the European Parliament;
- Move research finding towards deployment to close the implementation gap.

Potential contribution to the project: The EFN being part of a consortium has an EU added value providing concrete gender input in addressing key challenges such as people-centred care, prevention, addressing the SDGs, embracing innovative health technologies, and improving working conditions. In relation to new technologies, including AI and Robotics in care, EFN worked on eHealth services in nursing and social care (ENS4Care), where the EFN members identified eHealth solutions that are user-friendly and tailored to women’s specific roles and responsibilities, with technology empowering women. EFN led the evaluation of 175 good nursing practices in eHealth services with the objective to develop evidence based guidelines for the implementation of eHealth services in nursing and social care, focussing on prevention, clinical practice, advanced roles, nurse ePrescribing and integrated care. In addition, the EFN connections to the nursing research and academia environment through the European Nursing Research Federation (ENRF) can support the call submissions. The ENRF objective is to analyse and compile what already exists in terms of nursing research in the EU Member States, in order to convert existing data into evidence-based advocacy for the EU policy-making process.

Role in the project:

- Research Dissemination Other
